Introduction

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti

We consider M a hyperbolic 3-manifold of finite volume. Hyperbolic:

$$M \simeq \mathbb{H}^3 / \Gamma$$

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

Introduction

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti We consider M a hyperbolic 3-manifold of finite volume. Hyperbolic:

$$M\simeq \mathbb{H}^3/\Gamma$$

Where the holonomy map

 $\rho \colon \pi_1(M) \xrightarrow{\sim} \Gamma$

identifies $\pi_1(M)$ with a discrete subgroup

 $\Gamma \subset (\mathsf{P})\,\mathsf{SL}_2(\mathbb{C})$

Introduction

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti We consider M a hyperbolic 3-manifold of finite volume. Hyperbolic:

$$M\simeq \mathbb{H}^3/\Gamma$$

Where the holonomy map

 $\rho \colon \pi_1(M) \xrightarrow{\sim} \Gamma$

identifies $\pi_1(M)$ with a discrete subgroup

 $\Gamma \subset (\mathsf{P})\,\mathsf{SL}_2(\mathbb{C})$

which acts on \mathbb{H}^3 by isometries.

Hyperbolic manifolds

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti We consider M a hyperbolic 3-manifold of finite volume, for instance

Hyperbolic manifolds

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti We consider M a hyperbolic 3-manifold of finite volume, for instance

It follows from Mostow rigidity that the volume of M is a topological invariant.

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti An other topological invariant is the Reidemeister torsion of the pair

 (M, ρ)

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti An other topological invariant is the Reidemeister torsion of the pair

 (M, ρ)

where *M* is a hyperbolic manifold, and $\rho: \pi_1(M) \to SL_2(\mathbb{C})$ its holonomy.

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti An other topological invariant is the Reidemeister torsion of the pair

 (M, ρ)

where M is a hyperbolic manifold, and $\rho \colon \pi_1(M) \to SL_2(\mathbb{C})$ its holonomy.

It refines the cohomological information contained in some cellular complex

$$C^{0}(M,\rho) \xrightarrow{d_{0}} C^{1}(M,\rho) \xrightarrow{d_{1}} C^{2}(M,\rho) \to \dots$$

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti An other topological invariant is the Reidemeister torsion of the pair

 (M, ρ)

where M is a hyperbolic manifold, and $\rho \colon \pi_1(M) \to SL_2(\mathbb{C})$ its holonomy.

It refines the cohomological information contained in some cellular complex

$$C^{0}(M,\rho) \xrightarrow{d_{0}} C^{1}(M,\rho) \xrightarrow{d_{1}} C^{2}(M,\rho) \to \dots$$

It should be thought as the alternating product of the "determinants" of the boundary operators d_i :

$$\operatorname{tor}(M,\rho) = \prod_i \det(d_i)^{(-1)^i} \in \mathbb{C}^*$$

Torsion and volume

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti

The first natural (informal) question is the following:

Question

Is there a relation between $tor(M, \rho)$ and Vol(M)?

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへで

Torsion and volume

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti

The first natural (informal) question is the following:

Question

Is there a relation between $tor(M, \rho)$ and Vol(M)?

We introduce some notation: the (n-1)-th symmetric power Sym_{n-1} denotes the unique irreducible embedding

$$\operatorname{Sym}_{n-1}: \operatorname{SL}_2(\mathbb{C}) \hookrightarrow \operatorname{SL}_n(\mathbb{C})$$

induced by the isomorphism

$$\operatorname{Sym}_{n-1}(\mathbb{C}^2)\simeq\mathbb{C}^n$$

Torsion and volume

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti The first natural (informal) question is the following:

Question

Is there a relation between $tor(M, \rho)$ and Vol(M)?

We introduce some notation: the (n-1)-th symmetric power Sym_{n-1} denotes the unique irreducible embedding

$$\operatorname{Sym}_{n-1}$$
: $\operatorname{SL}_2(\mathbb{C}) \hookrightarrow \operatorname{SL}_n(\mathbb{C})$

induced by the isomorphism

$$\operatorname{Sym}_{n-1}(\mathbb{C}^2) \simeq \mathbb{C}^n$$

For instance

$$\operatorname{Sym}_{n-1} \begin{pmatrix} \lambda & 0\\ 0 & \lambda^{-1} \end{pmatrix} = \begin{pmatrix} \lambda^{n-1} & & \\ & \lambda^{n-3} & \\ & \ddots & \\ & & \lambda^{3-n} \\ & & \lambda^{3-n} \end{pmatrix}$$

Asymptotic of torsions

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti Previous question has been answered positively as follows:

Theorem (Müller '12 for the compact case, Menal-Ferrer–Porti '14 for the general case)

Denote by

$$\rho_n \colon \pi_1(M) \xrightarrow{\rho} \mathsf{SL}_2(\mathbb{C}) \xrightarrow{\mathsf{Sym}_{n-1}} \mathsf{SL}_n(\mathbb{C})$$

the (n-1) symmetric power of the holonomy representation of a hyperbolic manifold M. The following holds:

$$\lim_{n\to\infty}\frac{\log|\operatorname{tor}(M,\rho_n)|}{n^2}=\frac{\operatorname{Vol}(M)}{4\pi}$$

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti The first question it raises, which is our original motivation, is the following.

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti The first question it raises, which is our original motivation, is the following.

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

First recall that the holonomy representation ρ is part of a moduli space of deformations of geometric structures, the deformation variety, or character variety.

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti The first question it raises, which is our original motivation, is the following.

First recall that the holonomy representation ρ is part of a moduli space of deformations of geometric structures, the deformation variety, or character variety.

In a few words, despite the holonomy representation corresponds to the unique (thanks to Mostow rigidity) complete hyperbolic structure on *M*, one can deform this structure into non-complete ones, yielding a moduli space.

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti The first question it raises, which is our original motivation, is the following.

First recall that the holonomy representation ρ is part of a moduli space of deformations of geometric structures, the deformation variety, or character variety.

In a few words, despite the holonomy representation corresponds to the unique (thanks to Mostow rigidity) complete hyperbolic structure on M, one can deform this structure into non-complete ones, yielding a moduli space. Moreover, this character variety is an analytic (even algebraic) variety, equipped with analytic functions

tor:
$$[\varrho] \mapsto \text{tor}(M, \varrho)$$

Vol: $[\varrho] \mapsto \text{Vol}(\varrho)$

with $Vol(\rho) = Vol(M)$ when ρ is the holonomy.

Deformation

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti A natural question is then:

Question

Can we "deform" the statement of Müller and Menal-Ferrer–Porti into:

$$\lim_{n \to \infty} \frac{\log |\operatorname{tor}(M, \varrho_n)|}{n^2} = \frac{\operatorname{Vol}(\varrho)}{4\pi}$$

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

for any $\varrho \colon \pi_1(M) \to SL_2(\mathbb{C})$ close to the holonomy representation ρ ?

Deformation

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti A natural question is then:

Question

Can we "deform" the statement of Müller and Menal-Ferrer–Porti into:

$$\lim_{n\to\infty} \frac{\log|\operatorname{tor}(M,\varrho_n)|}{n^2} = \frac{\operatorname{Vol}(\varrho)}{4\pi}$$

for any $\varrho: \pi_1(M) \to SL_2(\mathbb{C})$ close to the holonomy representation ρ ?

It turns out that most of the techniques of their proofs fall down when ϱ is not the holonomy representation.

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti To begin with, we consider the following more simple family of deformations.

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti To begin with, we consider the following more simple family of deformations.

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

Remark

In the sequel we will always assume that $b_1(M) \ge 1$.

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti To begin with, we consider the following more simple family of deformations.

Remark

In the sequel we will always assume that $b_1(M) \ge 1$.

For sake of simplicity, assume that $b_1(M) = 1$. Let $m \in \pi_1(M)$ such that [m] is a generator of $H_1(M)/(\text{Tor } H_1(M)) \simeq \mathbb{Z}$.

$$\gamma \mapsto \rho_n(\gamma) \chi_{\zeta}(\gamma)$$

We will consider the torsions of the twisted representations $tor(M, \rho_n \otimes \zeta)$.

Twisted Alexander polynomials

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti There is a family of polynomials $\Delta_M^n(t) \in \mathbb{C}[t^{\pm 1}]$, the ρ_n -twisted Alexander polynomials, that refine the construction of the Alexander polynomial for knots (Wada, Lin...)

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

Twisted Alexander polynomials

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti There is a family of polynomials $\Delta_M^n(t) \in \mathbb{C}[t^{\pm 1}]$, the ρ_n -twisted Alexander polynomials, that refine the construction of the Alexander polynomial for knots (Wada, Lin...) These topological invariants have a (partially conjectural) strong detection power.

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

Twisted Alexander polynomials

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti There is a family of polynomials $\Delta_M^n(t) \in \mathbb{C}[t^{\pm 1}]$, the ρ_n -twisted Alexander polynomials, that refine the construction of the Alexander polynomial for knots (Wada, Lin...) These topological invariants have a (partially conjectural) strong detection power.

Our first result is the following:

Theorem (BDHP '19)

For any ζ on the unit circle \mathbb{S}^1 ,

 $|\Delta_{\mathcal{M}}^{n}(\zeta)| = |\operatorname{tor}(\mathcal{M}, \rho_{n} \otimes \chi_{\zeta})|.$

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

In particular, the polynomials Δ_M^n have no roots on the unit circle.

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti Those polynomials satisfy a lot of nice symmetry properties. Among them, if $\overline{M} \to M$ is a cyclic *k*-sheeted covering map then for any *t*

$$\Delta_{\overline{M}}^n(t) = \prod_{\zeta^k = 1} \Delta_M^n(\zeta t)$$

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti Those polynomials satisfy a lot of nice symmetry properties. Among them, if $\overline{M} \to M$ is a cyclic *k*-sheeted covering map then for any *t*

$$\Delta_{\overline{M}}^n(t) = \prod_{\zeta^k=1} \Delta_M^n(\zeta t)$$

Taking the log of the modulus, t=1, k=2

$$\log |\Delta_{\overline{M}}^n(1)| = \log |\Delta_{\overline{M}}^n(1)| + \log |\Delta_{\overline{M}}^n(-1)|$$

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti Those polynomials satisfy a lot of nice symmetry properties. Among them, if $\overline{M} \to M$ is a cyclic *k*-sheeted covering map then for any *t*

$$\Delta_{\overline{M}}^{n}(t) = \prod_{\zeta^{k}=1} \Delta_{M}^{n}(\zeta t)$$

Taking the log of the modulus, t=1, k=2

$$\log |\Delta_{\overline{M}}^n(1)| = \log |\Delta_{M}^n(1)| + \log |\Delta_{M}^n(-1)|$$

Replacing $\Delta_M^n(1)$ by tor (M, ρ_n) and dividing by n^2

$$\frac{\log|\operatorname{tor}(\overline{M},\overline{\rho}_n)|}{n^2} = \frac{\log|\operatorname{tor}(M,\rho_n)| + \log|\Delta_M^n(-1)|}{n^2}$$

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti Those polynomials satisfy a lot of nice symmetry properties. Among them, if $\overline{M} \to M$ is a cyclic k-sheeted covering map then for any t

$$\Delta^n_{\overline{M}}(t) = \prod_{\zeta^k=1} \Delta^n_M(\zeta t)$$

Taking the log of the modulus, t=1, k=2

$$\log |\Delta_{\overline{M}}^n(1)| = \log |\Delta_{\overline{M}}^n(1)| + \log |\Delta_{\overline{M}}^n(-1)|$$

Replacing $\Delta_M^n(1)$ by tor (M, ρ_n) and dividing by n^2

$$\frac{\log|\operatorname{tor}(\overline{M},\overline{\rho}_n)|}{n^2} = \frac{\log|\operatorname{tor}(M,\rho_n)| + \log|\Delta_M^n(-1)|}{n^2}$$

Taking the limit as $n \rightarrow \infty$ and applying previous theorem:

$$\frac{2 \operatorname{Vol}(M)}{4\pi} = \frac{\operatorname{Vol}(M)}{4\pi} + \lim_{n \to \infty} \frac{\log |\Delta_M^n(-1)|}{n^2}$$

Our main theorem

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti One deduces

$$\lim_{n \to \infty} \frac{\log |\Delta_M^n(\zeta)|}{n^2} = \frac{\operatorname{Vol}(M)}{4\pi}$$

for $\zeta = -1$. In fact, the same trick works as well for ζ root of order 3, 4, 6... but not more.

uniformly in ζ .

Cheeger-Müller theorem

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti As we said before, to prove this theorem we need to study the asymptotic of the Reidemeister torsions tor $(M, \rho_n \otimes \chi_{\zeta})$ as n goes to ∞ .

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

Cheeger-Müller theorem

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti As we said before, to prove this theorem we need to study the asymptotic of the Reidemeister torsions tor $(M, \rho_n \otimes \chi_{\zeta})$ as n goes to ∞ . The key ingredient is the following theorem:

Theorem (Cheeger '77, Müller '78, '91, Bismut–Zhang '91)

Let N be a compact (3-)manifold, $\varrho: \pi_1(N) \to \operatorname{GL}_n(\mathbb{C})$ a unimodular representation (i. e. $|\det \rho(\gamma)| = 1$ for any γ in $\pi_1(N)$). Let $T(M, E_{\varrho})$ denote the analytic torsion of the flat bundle E_{ϱ} associated to ρ . Then

$$|\operatorname{tor}(M,\varrho)| = T(M, E_{\varrho}).$$

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti For the proof we assume that M is compact, so that we can use the Cheeger–Müller theorem: since $\rho_n \otimes \chi_{\zeta}$ is unimodular, we are led to consider the sequence of analytic torsions

 $(T(M, E_{\rho_n \otimes \chi_{\zeta}}))_n.$

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti For the proof we assume that M is compact, so that we can use the Cheeger–Müller theorem: since $\rho_n \otimes \chi_{\zeta}$ is unimodular, we are led to consider the sequence of analytic torsions

$$(T(M, E_{\rho_n \otimes \chi_{\zeta}}))_n$$

• The flat vector bundle $E_{\rho_n \otimes \chi_{\zeta}}$ is the quotient $\mathbb{H}^3 \times_{\rho_n \otimes \chi_{\zeta}} \mathbb{C}^n$ of the trivial bundle of rank *n* on \mathbb{H}^3 by the equivalence relation

$$(\widetilde{x}, \mathbf{v}) \sim (\gamma \cdot \widetilde{x}, \rho_n \otimes \chi_{\zeta}(\gamma) \mathbf{v})$$

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti For the proof we assume that M is compact, so that we can use the Cheeger–Müller theorem: since $\rho_n \otimes \chi_{\zeta}$ is unimodular, we are led to consider the sequence of analytic torsions

$$(T(M, E_{\rho_n \otimes \chi_{\zeta}}))_n$$

• The flat vector bundle $E_{\rho_n \otimes \chi_{\zeta}}$ is the quotient $\mathbb{H}^3 \times_{\rho_n \otimes \chi_{\zeta}} \mathbb{C}^n$ of the trivial bundle of rank *n* on \mathbb{H}^3 by the equivalence relation

$$(\widetilde{x}, \mathbf{v}) \sim (\gamma \cdot \widetilde{x}, \rho_n \otimes \chi_{\zeta}(\gamma) \mathbf{v})$$

• An $E_{\rho_n \otimes \chi_{\zeta}}$ -valued function (or differential form) $f: M \to E_{\rho_n \otimes \chi_{\zeta}}$ is a $\pi_1(M)$ -equivariant function $f: \mathbb{H}^3 \to \mathbb{C}^n$. We denote by $\Omega^*(M, E_{\rho_n \otimes \chi_{\zeta}})$ the complex of $E_{\rho_n \otimes \chi_{\zeta}}$ -valued differential forms on M.

Idea of the proof: the analytic torsion 2. Asymptotic of tvisted polynomials L. Benard, J. Dubois, M. Heusener, J. The heat operator

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti We have just seen that to make sense of the determinant of the Laplace operator det Δ , one needs to study the sum $\sum_{m} e^{-t\lambda_{m}}$, which is the trace of the heat operator $e^{-t\Delta}$ (and is well-defined for any t > 0).

Denoting $(\Delta^n)_n$ for the family of Laplacians acting of forms valued in the family of bundles $(E_{\rho_n \otimes \chi_\zeta})_n$, we need to study the asymptotic behavior of the heat traces of this family as n goes to infinity.

Since the Laplacians operators are equivariant under the action of $\pi_1(M)$, we can decompose the heat traces on translated of a fundamental domain $\mathcal{F} \subset \mathbb{H}^3$ for M:

$$\operatorname{Tr} e^{-t\Delta^n} = \sum_{[\gamma] \in [\pi_1(M)]} \chi_{\zeta}(\gamma) \int_{\mathcal{F}} h_t^n(\widetilde{x}, \gamma \cdot \widetilde{x})$$

Ruelle zeta functions

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti After (many) more computations, one obtains the formula:

$$\log T(M, E_{\rho_n \otimes \chi_{\zeta}}) = \frac{n^2 \operatorname{Vol}(M)}{4\pi} - \sum_{k=1}^n \sum_{[\gamma] \neq 1} \log \left| 1 - \chi_{\zeta}(\gamma) e^{-\frac{k\lambda(\gamma)}{2}} \right|$$
(1)

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

where $\lambda(\gamma)$ is the complex length of γ i.e. $\rho(\gamma) \sim \begin{pmatrix} e^{\lambda(\gamma)/2} & 0\\ 0 & e^{-\lambda(\gamma)/2} \end{pmatrix}$.

Ruelle zeta functions

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti After (many) more computations, one obtains the formula:

$$\log T(M, E_{\rho_n \otimes \chi_{\zeta}}) = \frac{n^2 \operatorname{Vol}(M)}{4\pi} - \sum_{k=1}^n \sum_{[\gamma] \neq 1} \log \left| 1 - \chi_{\zeta}(\gamma) e^{-\frac{k\lambda(\gamma)}{2}} \right|$$
(1)

where $\lambda(\gamma)$ is the complex length of γ i.e. $\rho(\gamma) \sim \begin{pmatrix} e^{\lambda(\gamma)/2} & 0 \\ 0 & e^{-\lambda(\gamma)/2} \end{pmatrix}$. The last series is know as a Ruelle zeta function, and part of the computations goes through a proof of Fried theorem, which relates those Ruelle zeta functions with the analytic torsion.

Ruelle zeta functions

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti After (many) more computations, one obtains the formula:

$$\log T(M, E_{\rho_n \otimes \chi_{\zeta}}) = \frac{n^2 \operatorname{Vol}(M)}{4\pi} - \sum_{k=1}^n \sum_{[\gamma] \neq 1} \log \left| 1 - \chi_{\zeta}(\gamma) e^{-\frac{k\lambda(\gamma)}{2}} \right|$$
(1)

where $\lambda(\gamma)$ is the complex length of γ i.e. $\rho(\gamma) \sim \begin{pmatrix} e^{\lambda(\gamma)/2} & 0\\ 0 & e^{-\lambda(\gamma)/2} \end{pmatrix}$.

The last series is know as a Ruelle zeta function, and part of the computations goes through a proof of Fried theorem, which relates those Ruelle zeta functions with the analytic torsion. The end of the proof deals with the convergence of the above sum as n goes to ∞ . The delicate points are uniformity of the convergence.

L. Benard, J. Dubois, M. Heusener, J. Porti

The representation ρ_n restricts to a representation of $\pi_1(\Sigma)$, and the monodromy acts on $\rho_{n,\Sigma}$ by conjugation.

In other words, $[\rho_{n,\Sigma}]$ is a fixed point for the action of ϕ on the character variety of Σ .

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti Assume that *M* is fibered: $M = \Sigma \times [0, 1]/(x, 0) \sim (\phi(x), 1)$ for some surface Σ and some diffeomorphism $\phi \colon \Sigma \to \Sigma$, called the monodromy.

The representation ρ_n restricts to a representation of $\pi_1(\Sigma)$, and the monodromy acts on $\rho_{n,\Sigma}$ by conjugation.

In other words, $[\rho_{n,\Sigma}]$ is a fixed point for the action of ϕ on the character variety of Σ .

We prove the following:

Theorem (BDHP'19)

The action of the monodromy ϕ on $[\rho_{n,\Sigma}]$ has hyperbolic dynamic. Namely its tangent map has no eigenvalues of modulus one.

About the proof

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti The proof comes from the following well-known fact theorem (due to Weyl): the tangent space of the character variety $X(\Sigma)$ naturally identifies with the first twisted cohomology group

$$\mathcal{T}_{[
ho_{n,\Sigma}]}X(\Sigma)\simeq H^1(\Sigma,\operatorname{Ad}\circ
ho_{n,\Sigma})$$

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

About the proof

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti The proof comes from the following well-known fact theorem (due to Weyl): the tangent space of the character variety $X(\Sigma)$ naturally identifies with the first twisted cohomology group

$$T_{[\rho_{n,\Sigma}]}X(\Sigma)\simeq H^1(\Sigma,\operatorname{Ad}\circ\rho_{n,\Sigma})$$

What we prove is indeed a refinement of the theorem of Weil:

Proposition (BDHP'19)

The tangent map of ϕ acting on $[\rho_{n,\Sigma}]$ has characteristic polynomial equal to the twisted Alexander polynomial.

About the proof

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti The proof comes from the following well-known fact theorem (due to Weyl): the tangent space of the character variety $X(\Sigma)$ naturally identifies with the first twisted cohomology group

$$T_{[\rho_{n,\Sigma}]}X(\Sigma)\simeq H^1(\Sigma,\operatorname{Ad}\circ\rho_{n,\Sigma})$$

What we prove is indeed a refinement of the theorem of Weil:

Proposition (BDHP'19)

The tangent map of ϕ acting on $[\rho_{n,\Sigma}]$ has characteristic polynomial equal to the twisted Alexander polynomial.

We conclude with our first theorem.

An application of the main theorem.

Asymptotic of twisted polynomials

L. Benard, J. Dubois, M. Heusener, J. Porti We define the Mahler measure of a polynomial P as

$$m(P) = rac{1}{2\pi} \int_0^1 \log |P(e^{i\theta})| d\theta.$$
